Specificity	The NK1 antibody is directed against the distal end of the carboxyl- terminal tail of human Neurokinin Receptor 1 (also called Substance P Receptor). It detects selectively the canonical full-length NK1 Tachykinin Receptor. It can be used to detect total NK1 receptors in Western blots independent of phosphorylation. The NK1 antibody can also be used to isolate and enrich NK1 receptors from brain lysates. It also detects NK1 in cultured cells and tissue sections by immunohistochemistry.
